Hello

Welcome to Nautel Waves with important news about our webinars and SBE re-certification, HD Radio, AIR India deployment, and Ted's top 5 reasons to upgrade your software.

Also, hear from Nautel customers, Alex Hartman and Bryan Hubert, about their installations of the very first GV Series transmitters.

Nautel Webinars Qualify for SBE Re-Certification!

It's official! The completion of a Nautel webinar now qualifies for ½ SBE re-certification credit, as identified under Category I of the Re-certification Schedule for SBE Certifications.

Some of the best ideas come from our customers. We say thanks to Joe Portelli, who posted on [Nautel's Facebook page](#), for this one.

Ted's Top 5 Reasons to Upgrade your Software

Has it been a while since you upgraded your transmitter software? The past year saw the release of version 4.0 software for all of our major transmitter product lines. This was the culmination of years of effort, including hundreds of enhancements.

If you haven't upgraded to version 4, you're missing out. Are you wondering why you should bother? Ted Coldwell, Nautel Software Manager, has compiled five reasons why he recommends upgrading to the latest software.

Customer Stories: Two Firsts for the New GV Series

Alex Hartman, Chief Engineer for KVSC, shares a detailed user report about the very first GV10 going on air at St. Cloud State University, MN.

"My GV10 running at 1/2 power with -14dBc injection is achieving 74.8% efficiency. When run into a dummy load at full 9 kW output with -14dBc, that number jumped up to 89%! Not much wasted juice there!"

Bryan Hubert, Chief Engineer for Crista Media, shares his story of the very first GV40 being installed at the summit of Mount Constitution on Orcas Island, WA, direct from the exhibition floor of NAB 2014.

"It's nice to put in a new transmitter, increase the HD level, and actually see a reduction in power consumption!"

AIR India Installations have Begun

Nautel has almost completed shipments and is now installing 27 MW-AM DRM-enabled transmitters and associated equipment for All India Radio (AIR) as part of the world's largest digital radio deployment to date.

The deployment includes eleven NX100 (100 kW transmitter), ten NX200 (200 kW transmitter), and six NX300 (300 kW transmitter) all configured for DRM30 transmission.

The first transmitter to ship was an NX200 back in August, 2013 and its installation in Delhi kicked off the deployment with final commissioning completed in May, 2014.

Peter's Fireside Chat

Those nice quiet neighbors next door...

Canadians take a bit of a rap sometimes for being overly polite. We are not generally inclined to "toot our own horns." That's OK, as far as I am concerned.

However, if a company is committed, as we are, to a culture of **Continuous Improvement** (including such things as continuing to support products forever; adding new functionality to existing product families; and the ongoing creation of new families of product and services) making those investments can be complex, expensive and frightening. Sometimes, it is reassuring to receive confirmation from independent sources that those efforts are appreciated and worthwhile.

So, in a very non-Canadian fashion, I want to let you all know that Nautel was recently selected as one of the **PROFIT500 Fastest Growing Companies** in Canada. Imagine a 45 year-old company growing at the same rate as a start-up? Very cool!

This recognition was only possible because **all of you** have honored us by being our friends, our partners, our customers. Our growth comes from you and, in the spirit of continuous improvement, I commit to you that we will do everything in our power to continue to earn your trust and confidence. On behalf of the Nautel team... Thank You!

HD Radio Service Bulletin

Attention Nautel HD Radio Broadcasters

We have received a [Service Bulletin from iBiquity](#) identifying an issue with a specific car receiver manufacturer.

Nautel Exporter Plus customers running SW Rel 1.6.1 or later are unaffected by this issue.

LPFM Corner by Christy Lynn White

Since the October 2013 filing window, over 1,220 low-power construction permits have been granted from 2,826 applications. While this has been a much faster process than the last window, we can expect to see the process slow down, as the straight-forward, some might even say easy, applications have been processed.

Earlier this month, at the FCC's open meeting, the Media Bureau indicated remaining MX'd applications will be dealt with by the end of the year. [Click here](#) to see the open meeting presentation. Comments can be found in [this Radio World article](#) and [The LPFM Buyer's Guide](#) (part of The Broadcasters' Desktop Resource.)

Some quick-acting applicants are already licensed and on the air. Those on-air sit at less than 1% of the granted CP's, so there are plenty in the planning stages. Nautel is here to help you get on the air, and to have the best sound out there. Check out our new [LPFM FAQs](#) and resources on the [LPFM page](#).
