

New plug and play NV and VS Series Platinum Power Supply Upgrade

Lower operating costs

Payback as low as 4-5 years*

Existing NV and VS Series transmitters can now achieve platinum level power supply efficiencies with a simple plug and play upgrade. This new Nautel power supply is a direct replacement for existing NV Series power supplies and offers considerable advantages over the previous generation of switching power supplies as detailed below:

- Power supply efficiency comparable to latest Nautel GV Series
- Fast payback and ongoing savings
- Additional savings may result from reduced air conditioning requirements
- Reduced heat and lower temperatures are associated with transmitter longevity
- Conformal coating minimizes the impact of dust
- Upgraded VS300 will support input voltages down to 90 VAC
- 4 year warranty

Please contact Nautel support for ordering information.
1-877-628-8353, support@nautel.com

*Payback example: Typical payback period of 4.7 years per power supply for an NV transmitter operating at nameplate power and a power cost of \$0.15 per kWh. Additional savings may result from reduced air conditioning requirements.

GENERAL

Description

Platinum grade power supply

Standard Features

High CFM (air volume) fans

Conformal coated

Hot-swappable

Nautel Systems Supported

NV Series (all models)

VS Series

Support Considerations

Can be mixed with non-platinum supplies
