

Radio Air-Chain INNOVATION

nautel

Telos
Alliance®

Webinar 1 of 3
August 13, 2020

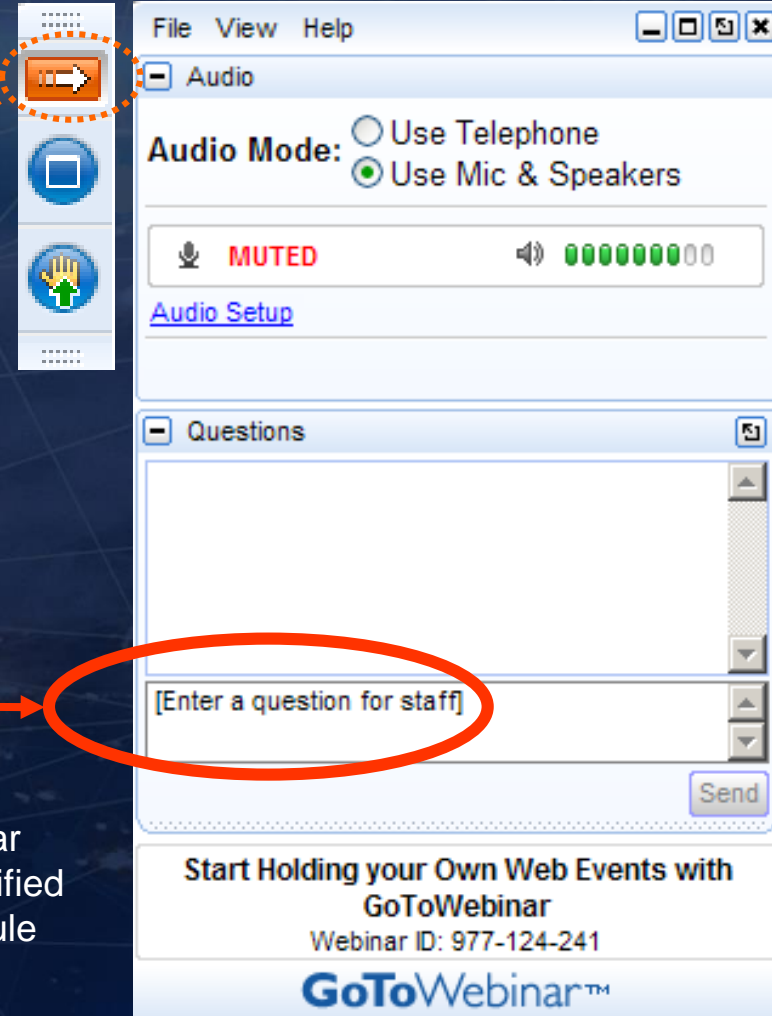

Your questions please?

(if you don't see the control panel, click on the orange arrow icon to expand it)

Please enter your questions in the text box of the webinar control panel (remember to press send)

Remember: The completion of a Nautel webinar qualifies for ½ SBE re-certification credit, identified under Category I of the Re-certification Schedule for SBE Certifications.

Host Jeff Welton
Sales Manager, Central USA

Panelist Frank Foti
Executive Chairman and
Founder of Omnia

Panelist Geoff Steadman
Omnia Product Manager

Panelist Philipp Schmid
Nautel Chief Technology Officer

Panelist John Whyte
Nautel Head of Marketing

Today's topics

- What is the collaboration and why?
- Radio Air-Chain challenges
- Technologies that can help
- “Made for Radio” standards
- Examples of fresh approaches

So why this current collaboration and why now?

- Two companies passionate about innovation
- Industry, technology changing
- Broadcasters facing challenges
- There is a great opportunity for fresh approaches

Five decades of Nautel innovation

- 1st commercially successful Solid-State Radio Transmitter
- More recent innovations:
 - NV Series: 1st affordable high-power solid-state FM transmitters
 - Advanced User Interface(AUI) for control/instrumentation/access
- HD Radio innovations
 - HD PowerBoost
 - Spectrum Efficiency Optimizer
 - Reliable HD Transport
 - 1st HD Radio SFN
 - HD Multiplex: All Digital FM HD Radio
 - All Digital AM

Telos Alliance Innovation

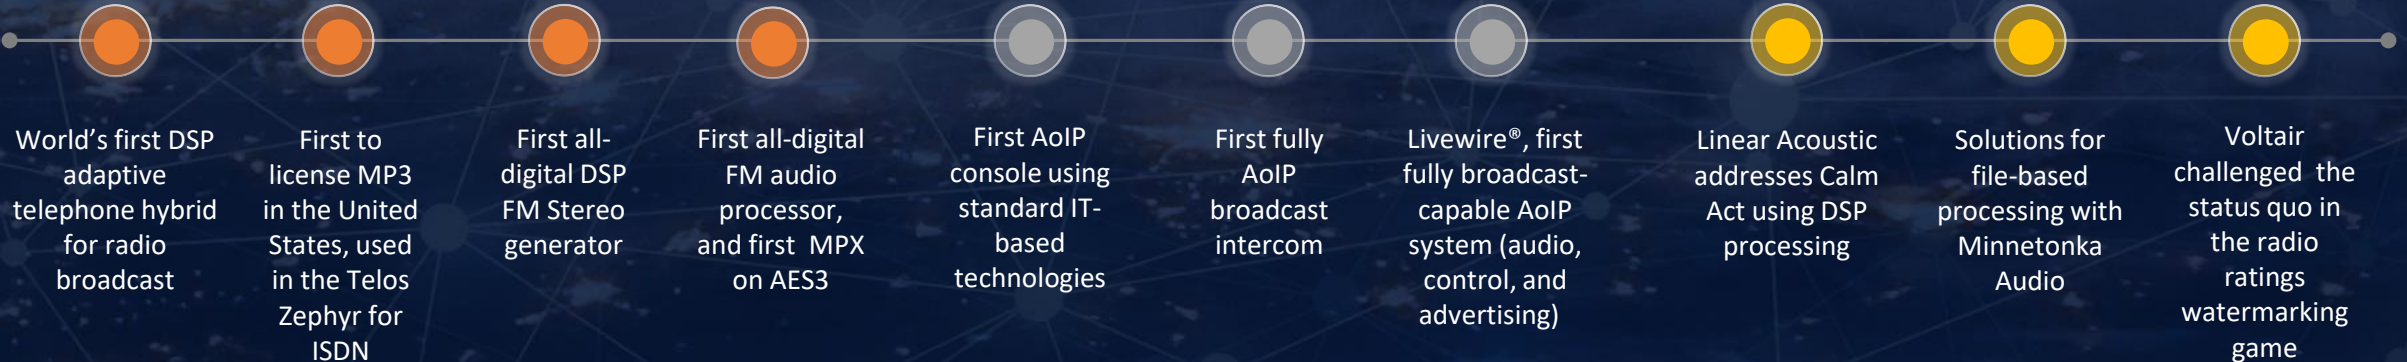

Digital Signal Processing

AoIP

Innovative Solutions for Broadcasters

Nautel/Telos Alliance Collaboration Legacy

- 2010 VS first transmitter with Livewire audio over IP input
- 2012 “Omnia Direct” First MPX over AES
- 2016 μ MPX demonstration
 - Moseley
 - Telos
 - Nautel

μ MPXTM

Telos
Alliance

Radio's 1st Composite FM Codec

High quality MPX over a 320kbps IP connection

Technological, Competitive and Regulatory Change

- COVID forced extreme and urgent change
 - Remote becomes normal
 - Portions of the air-chain are virtualized
- Main studio rule removed
- Competing for the listener's ear
 - Fragmenting listener base
 - Battle for the car dashboard
 - Podcasts becoming a factor
- Managing technological complexity

Podcasts to break \$1B in 2021

Source: Interactive Advertising Bureau and PricewaterhouseCoopers.

Digital Radio matters more now

- 65 Million HD Radio cars
- Opportunities:
 - Podcasts/Streams On-Air
 - Ethnic broadcasting
 - Leased channels
 - Sports coverage
- Over 2300 HD Radio stations
 - but 13,000 Analog only
- Challenging for many:
 - Too complex? Too expensive? ROI?

So why this current collaboration and why now?

- Passion
- Innovation

- Technology
- Industry
- Regulation

- New approaches
- New technologies
- Hide complexity
- Drive out costs

Cheaper, Easier, More Flexible Air-Chain Solutions

Radio Air-Chain Challenges

Typical FM Radio Air-Chain

Has become increasingly complex over time

Multiple purpose-built boxes to be configured/managed

Studio better location for complexity, but...

- Audio processor at studio or transmitter
- FM STL: licensed RF, unlicensed RF, T1 telco, IP based
 - Analog L/R audio or stereo composite
 - Digital L/R audio or IP codecs

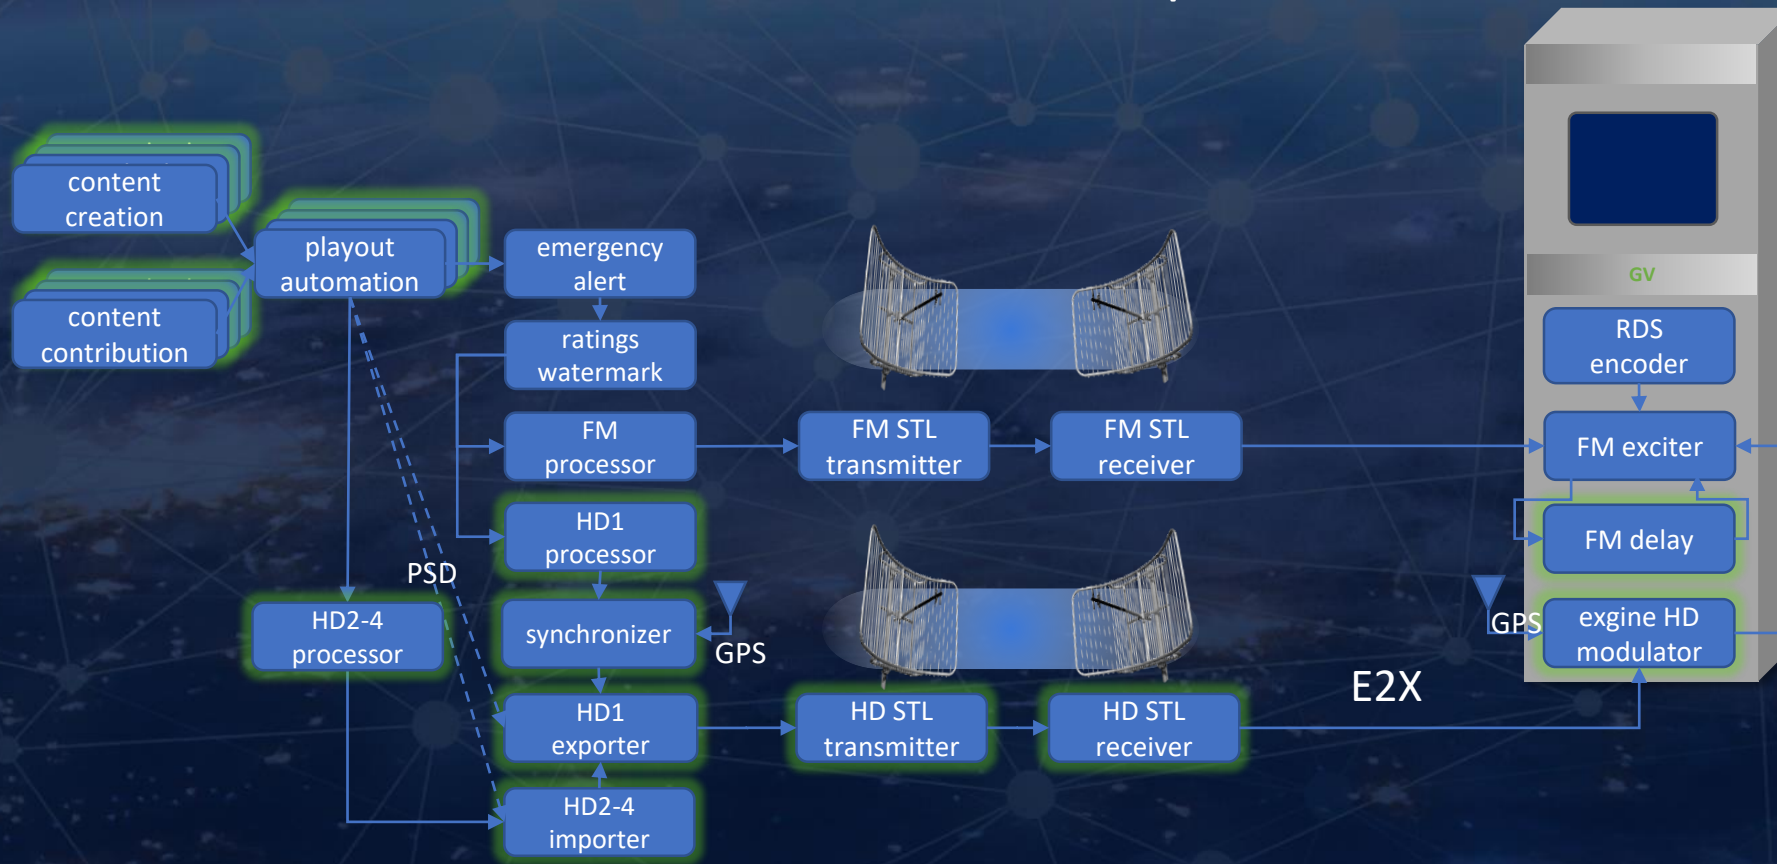

Typical FM Radio Air-Chain

... but where does the equipment go if the local studio goes away?

HD Radio adds even more complexity and cost

Initially Importer and Exporter at studio to minimize HD STL bandwidth
Often a 2nd STL and even a 2nd transmitter required

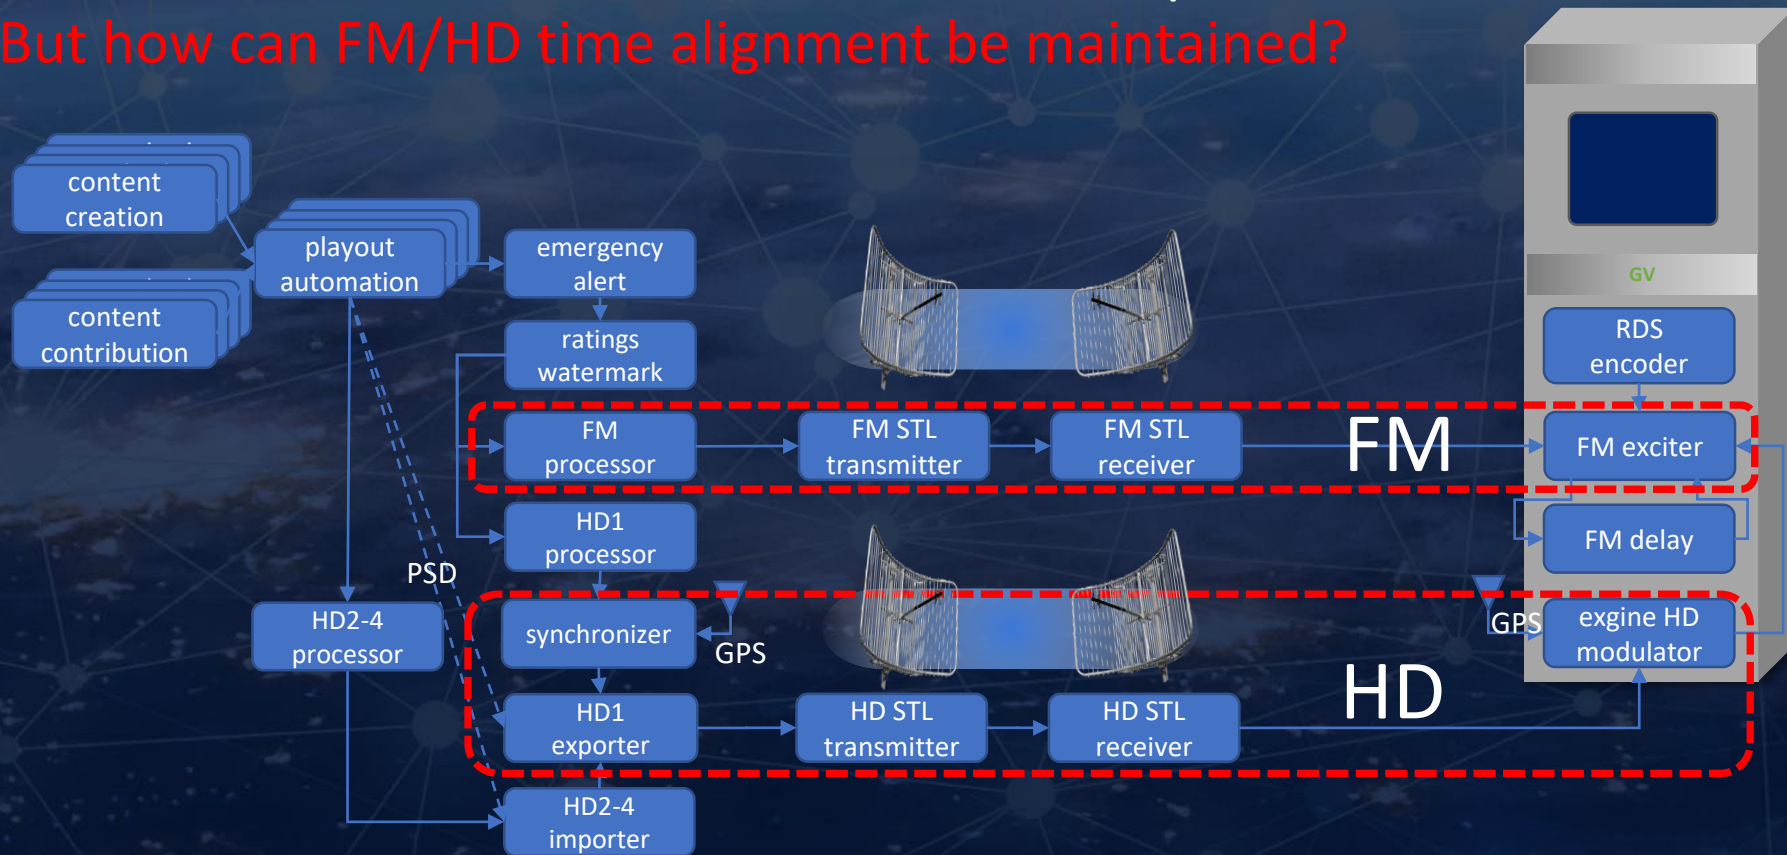

HD Radio adds even more complexity and cost

Initially Importer and Exporter at studio to minimize HD STL bandwidth

Often a 2nd STL and even a 2nd transmitter required

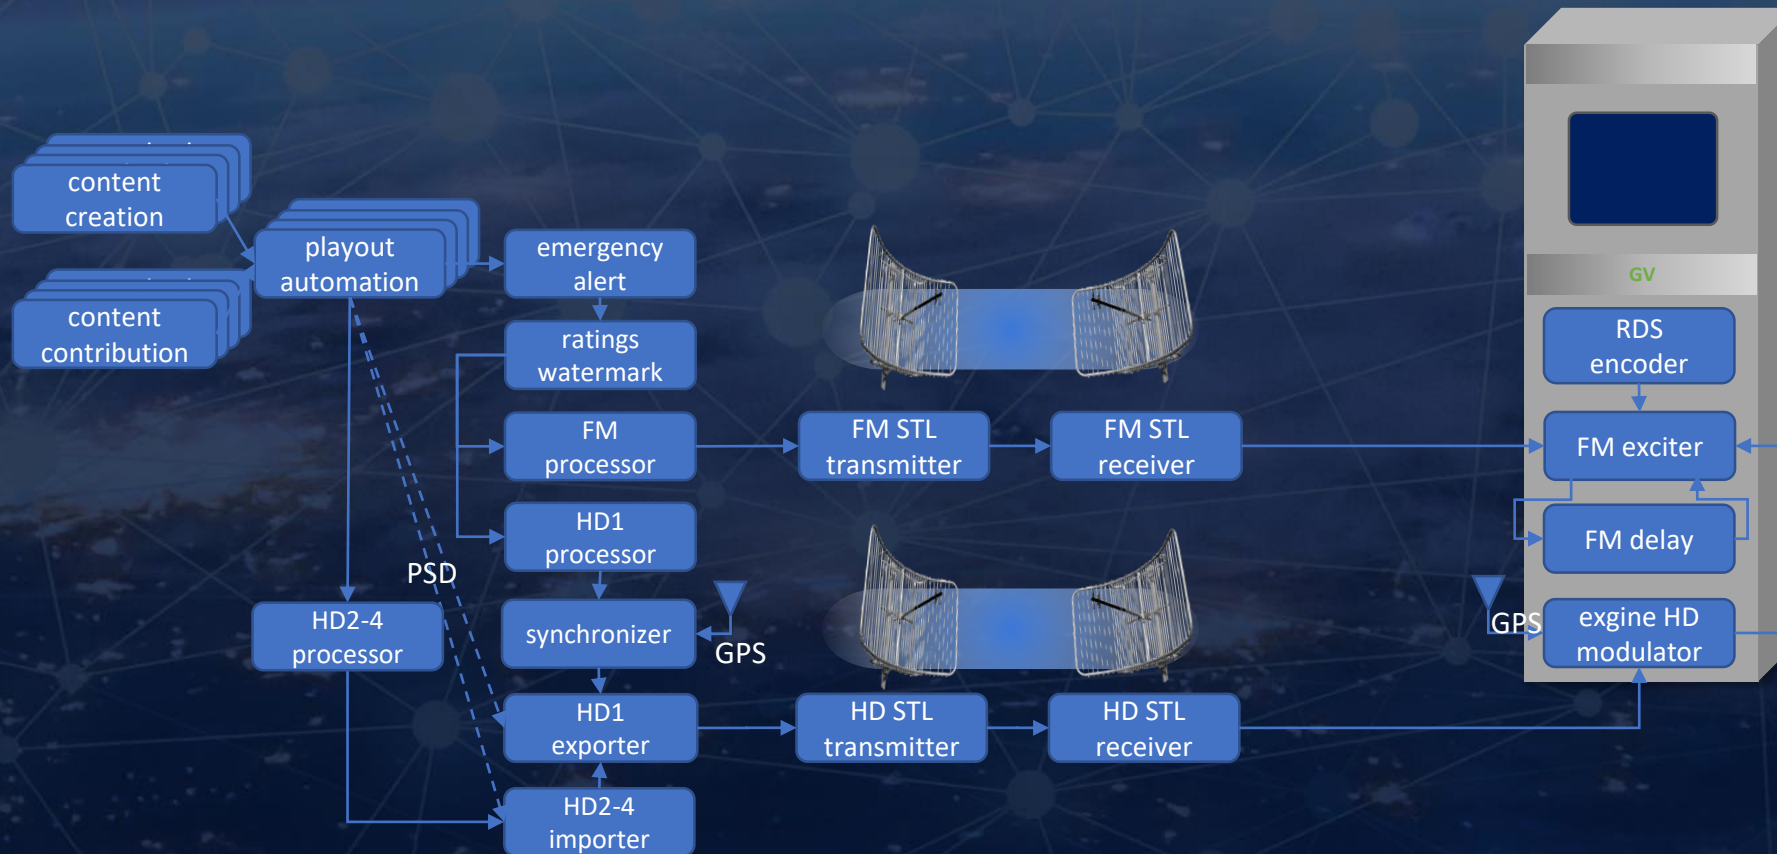

But how can FM/HD time alignment be maintained?

FM and HD audio must be within **3 audio samples**

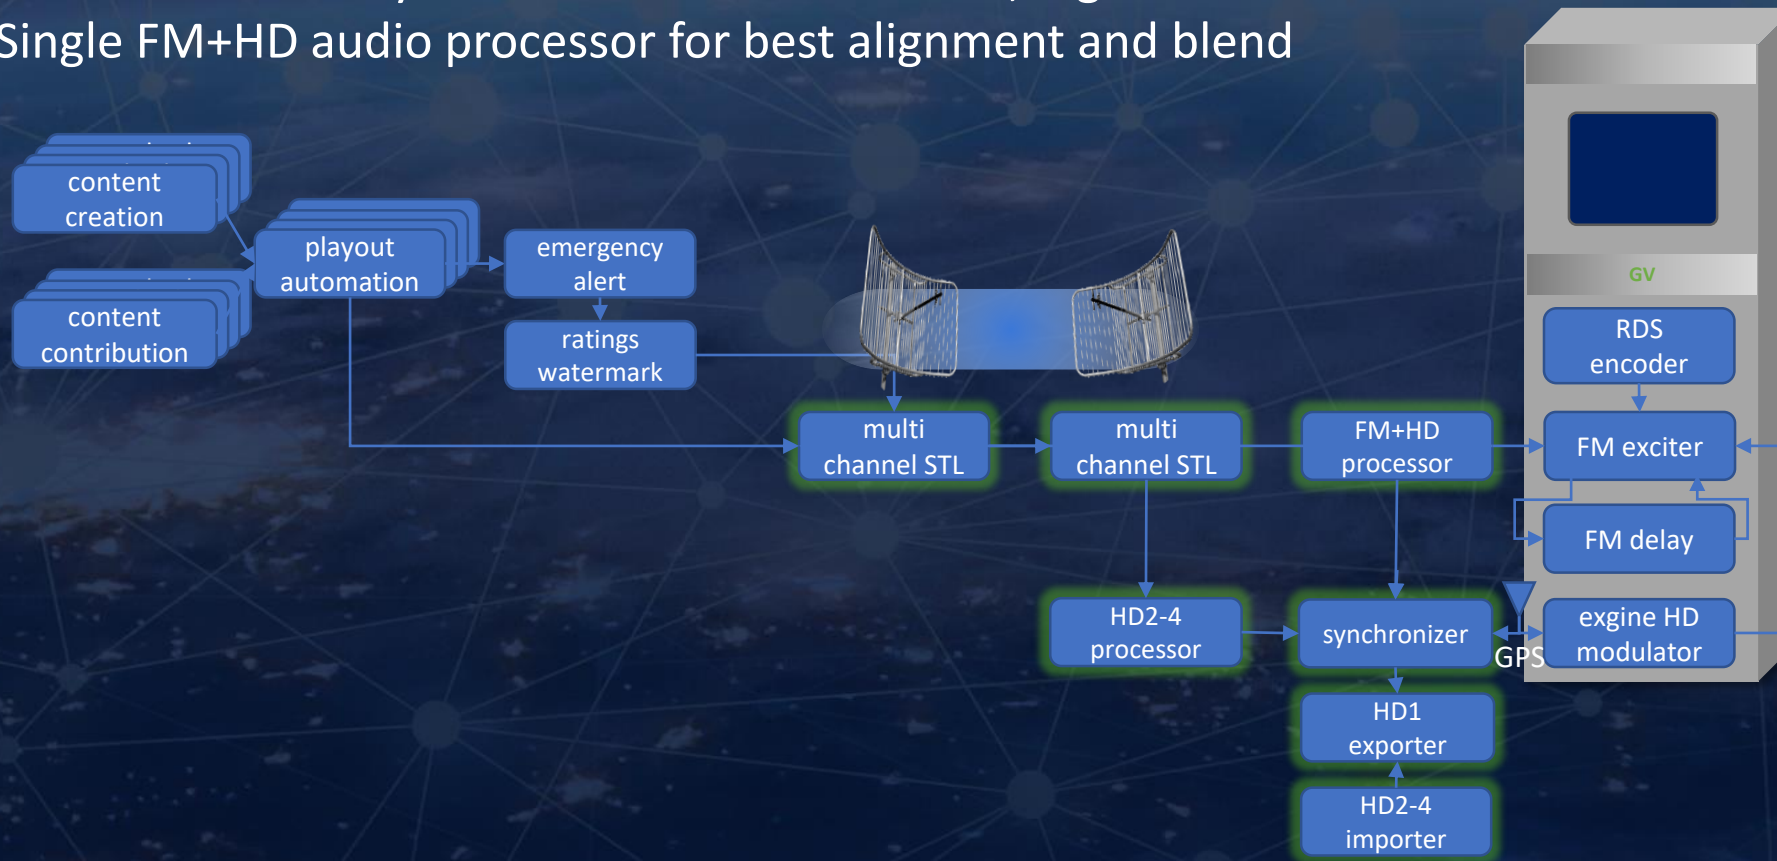

Approaches for Optimizing FM/HD Blend Experience

All HD equipment AND audio processor is suggested to be at the transmitter site*

Approaches for Optimizing FM/HD Blend Experience

All HD equipment AND audio processor is suggested to be at the transmitter site*
STL must now carry all HD1-HD4 audio streams, high bandwidth
Single FM+HD audio processor for best alignment and blend

Radio Air-Chain Challenges Summary

- Analog Air-Chain is complex, many purpose-built boxes
- HD Radio adds even more complexity
 - HD is often bolted on to existing sites
 - HD diversity delay
 - Complexity is located at the remote Tx site
 - Not easily scalable for fleet upgrades and maintenance of HD Radio
- High investment for HD conversion
 - Additional content creation for HD2,HD3,HD4
 - HD transmitter, importer, exporter, additional audio processing
 - STL requirements: changing FM air-chain to fit HD
 - Main channel audio + Secondary audio + Data services
- Industry is looking for solutions to simplify the radio air-chain

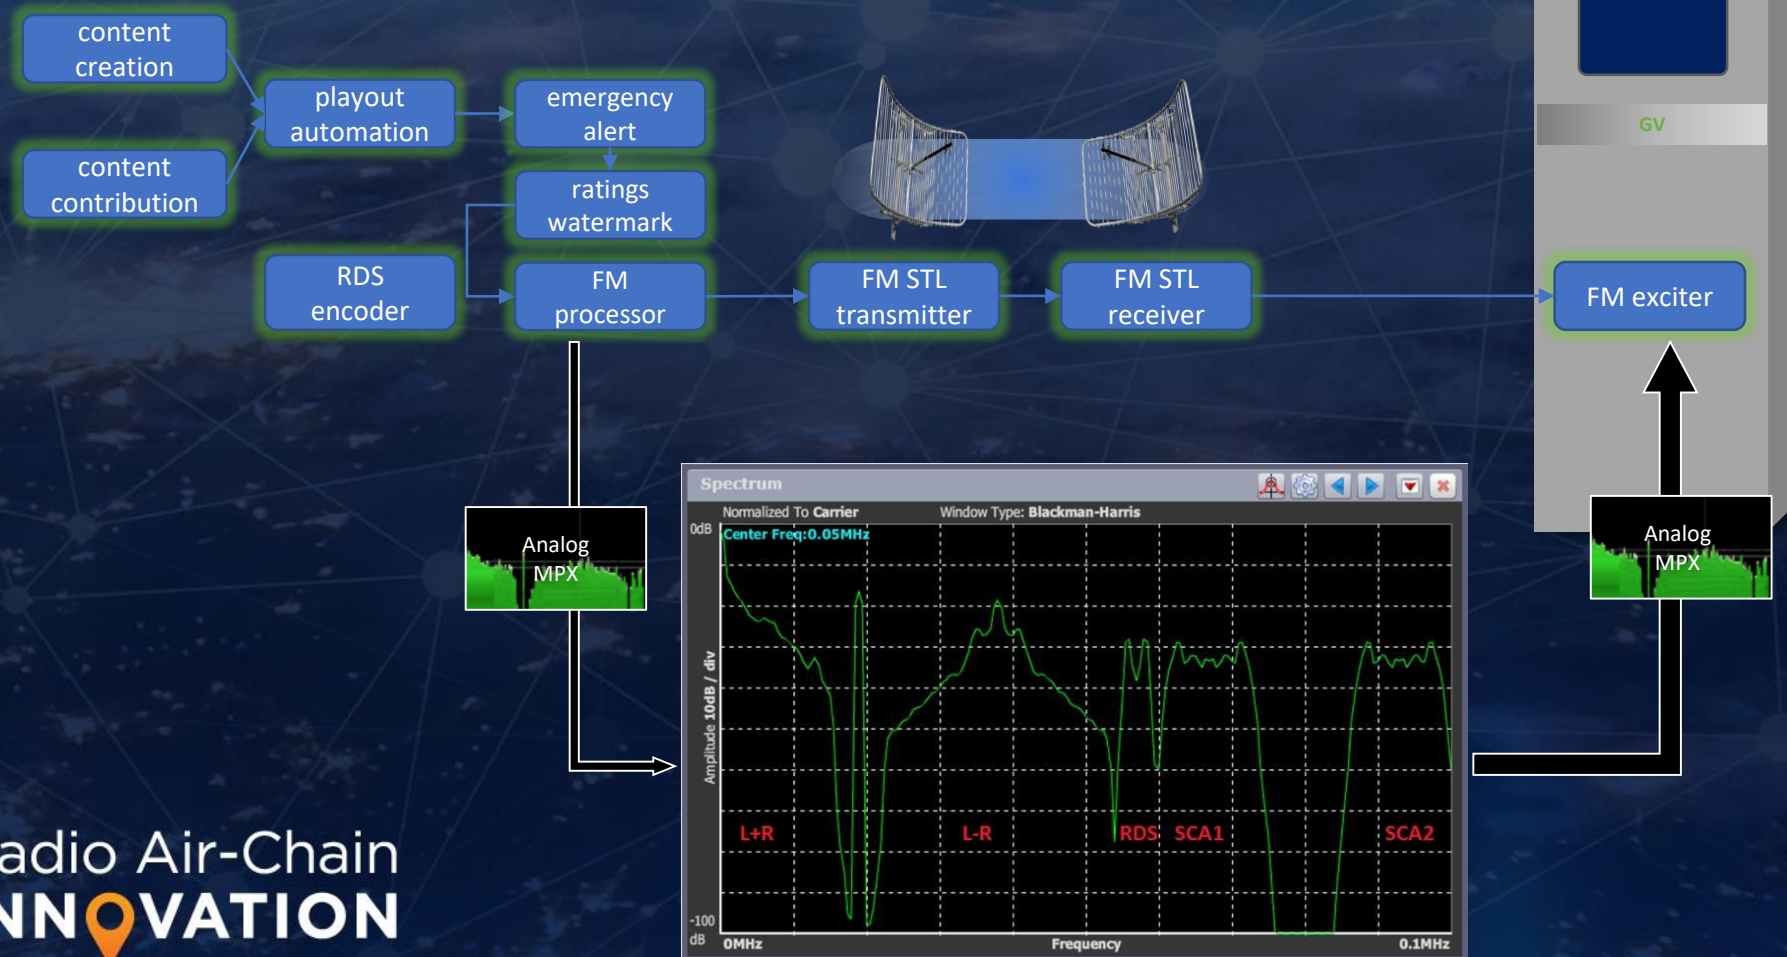

What technologies can help the FM Radio Air-Chain?

Made for Radio: MPX over IP

Composite signal carries all FM signal components

Simplifies signal transfer

Provides flexibility to locate processing at the studio

Analog versus Digital MPX across the STL

- Analog STL interference impacts audio quality

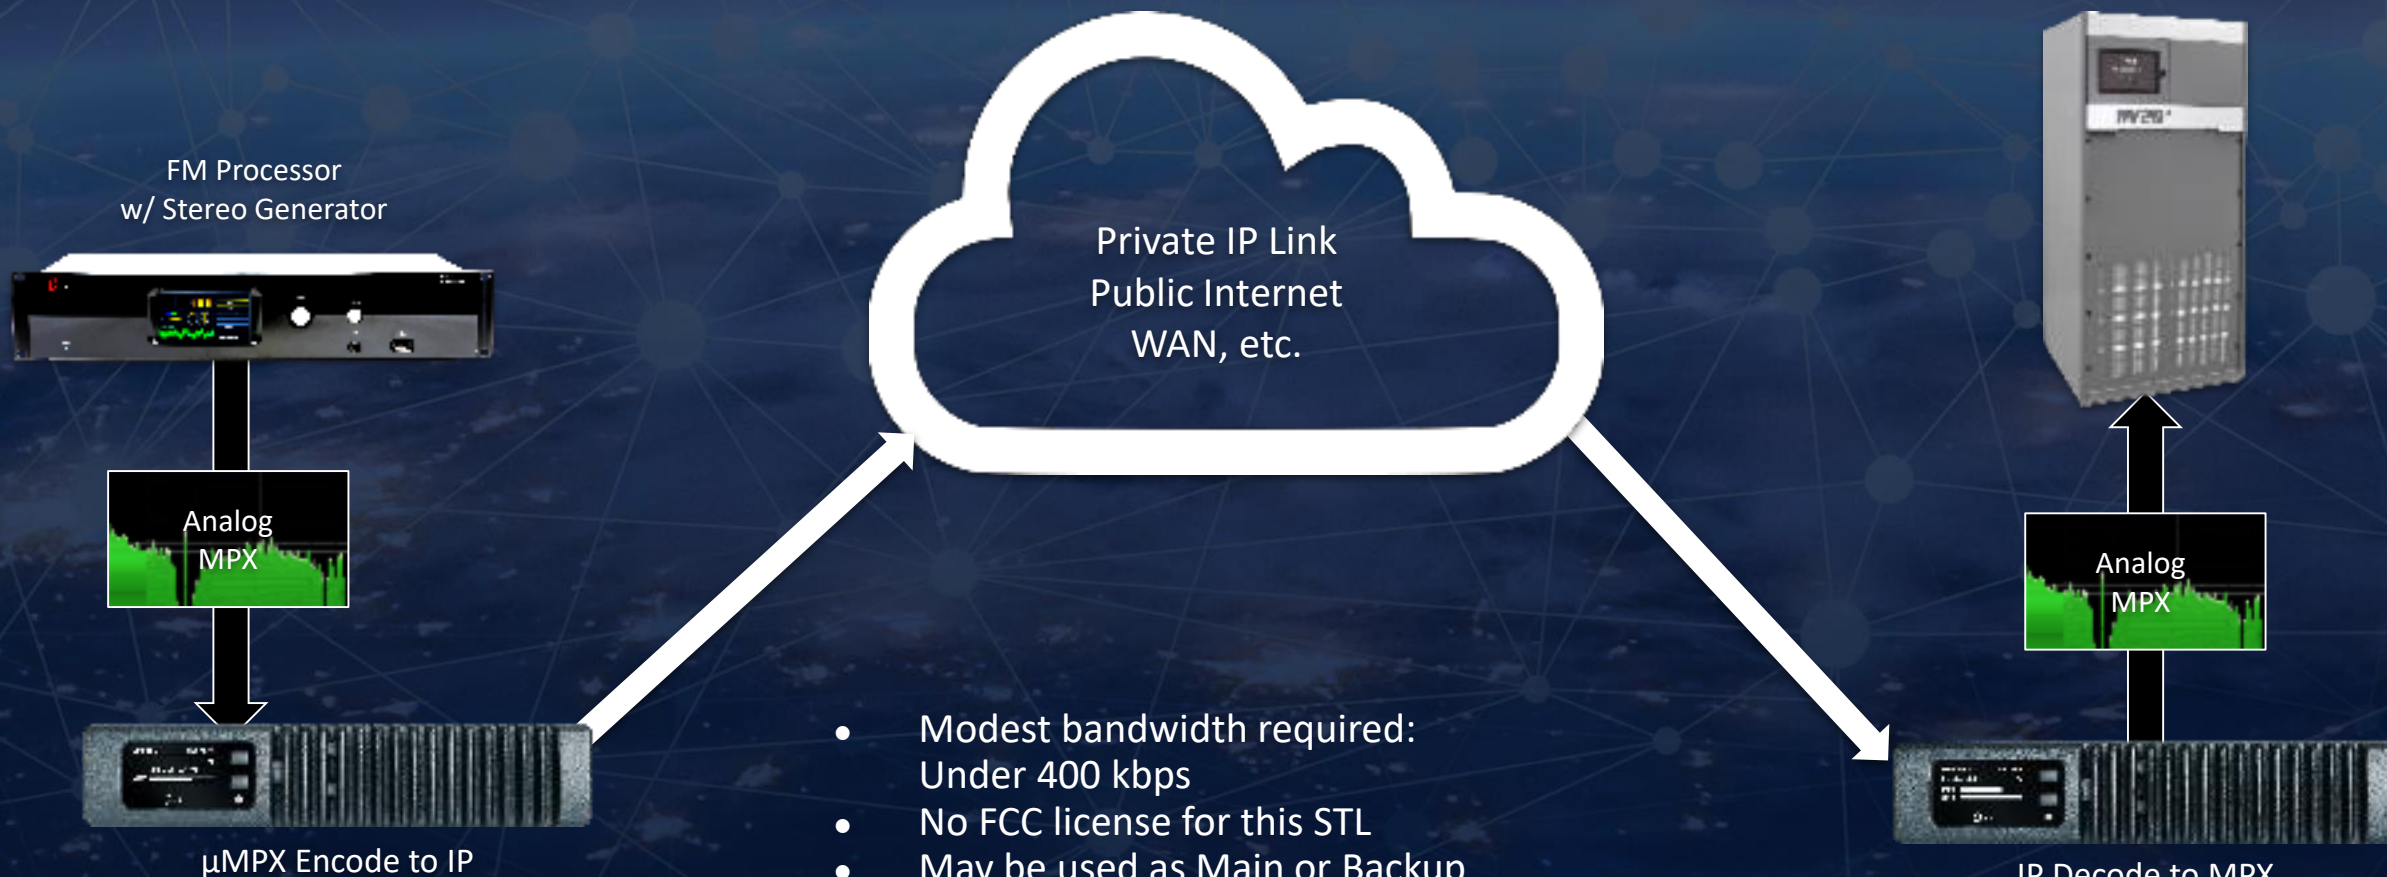

Analog MPX STL

- Loudest & cleanest audio
- No noise with digital MPX

Digital MPX STL

Omnia MPX Node (μMPX) Studio Transmitter Link

- Modest bandwidth required: Under 400 kbps
- No FCC license for this STL
- May be used as Main or Backup
- Cleaner than an analog STL system
- Transports RDS / RBDS data
- No modulation-robbing overshoots
- No psychoacoustic encoding artifacts

Telos Omnia.9 with μ MPX Encoding

Omnia.9 I/O

L/R Input types

- Analog
- AES Digital
- Livewire+ AES67

Omnia.9 MKII
FM Processor

Processed Output Types

- L/R
 - Analog
 - AES
 - Livewire+ AES67
- Composite
 - Analog MPX
 - AES MPX
 - MPX over IP
 - μ MPX

Omnia.9 I/O

Broadcast industry has moved towards IP based I/O for all Air-Chain components

L/R Input types

- Livewire+ AES67

Omnia.9 MKII
FM Processor

Processed Output Types

- Livewire +AES67
- Composite
 - MPX over IP
 - μ MPX

New! Omnia Enterprise 9s (a virtualized Omnia.9)

Broadcast industry can now move to virtualized software Air-Chain components

<https://www.telosalliance.com/Omnia/Omnia-Enterprise-9s>

L/R Input types

- Livewire+ AES67

Omnia Enterprise 9s
FM / HD Processor

Processed Output Types

- Livewire +AES67
- Composite
 - MPX over IP
 - µMPX

Benefits of Virtualized Omnia Processing

- Enabled by standards based IP audio
- Leverages scalable IP Infrastructures
- Ability to run multiple instances on a single server
- Ability to host the server on premises or in the cloud
- Facilitates resiliency/failover
- Ability to integrate processing within other workflows

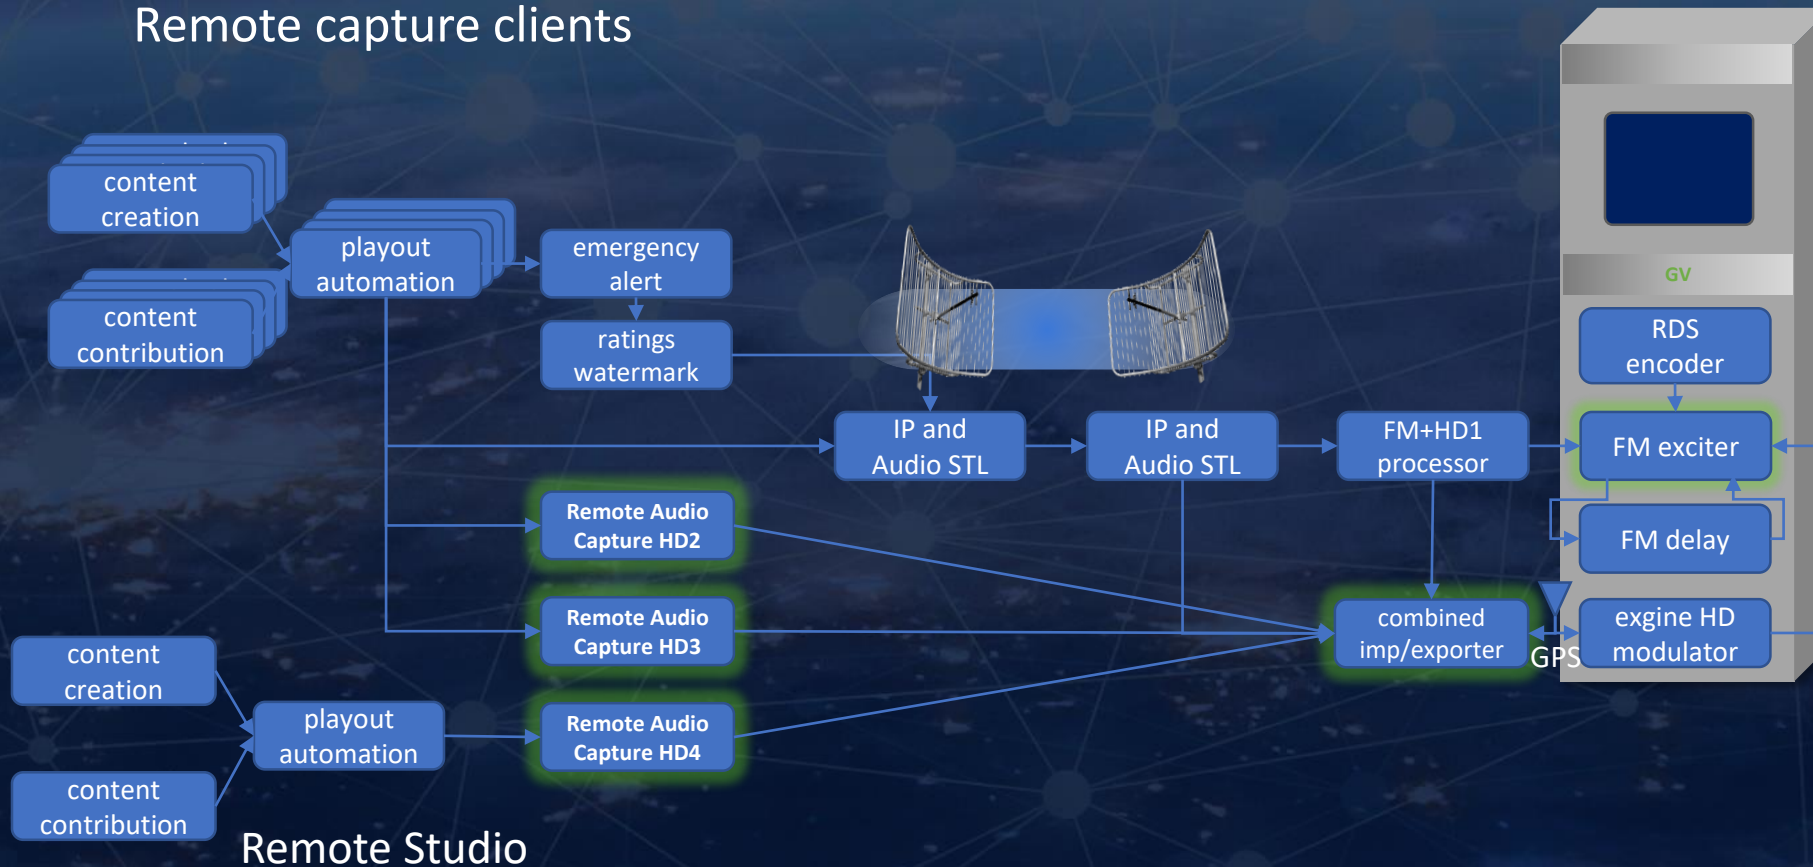

What technologies can help the HD Radio Air-Chain?

Gen4 HD Radio Architecture Improvements

Combined Importer Exporter platform

New exciter hardware platform options for manufacturers

Remote capture clients

Made for Radio: Gen4 IBOC Architecture

Manufacturer Platform Options:

1. Fixed Purpose built Gen4 embedded systems
2. Flexible Gen4 Open OS platform
 - Allows an eco system of broadcast apps
 - Integrated audio processing
 - Integrated audio over IP
 - Integrated playout
 - Disaster recovery
3. Software only Gen4 Platform

DTS/Xperi provides **standard IP building blocks**
for vendor interoperability

Open Operating System: Nautel HD MultiCast+

Transforms embedded purpose-built Gen4 hardware into open operating system Gen4

Flexible Gen4 Open OS approach

Allows an ecosystem of broadcast apps:

- Integrated audio processing
- Integrated audio over IP
- Integrated playout
- Disaster recovery

Facilitates virtualization

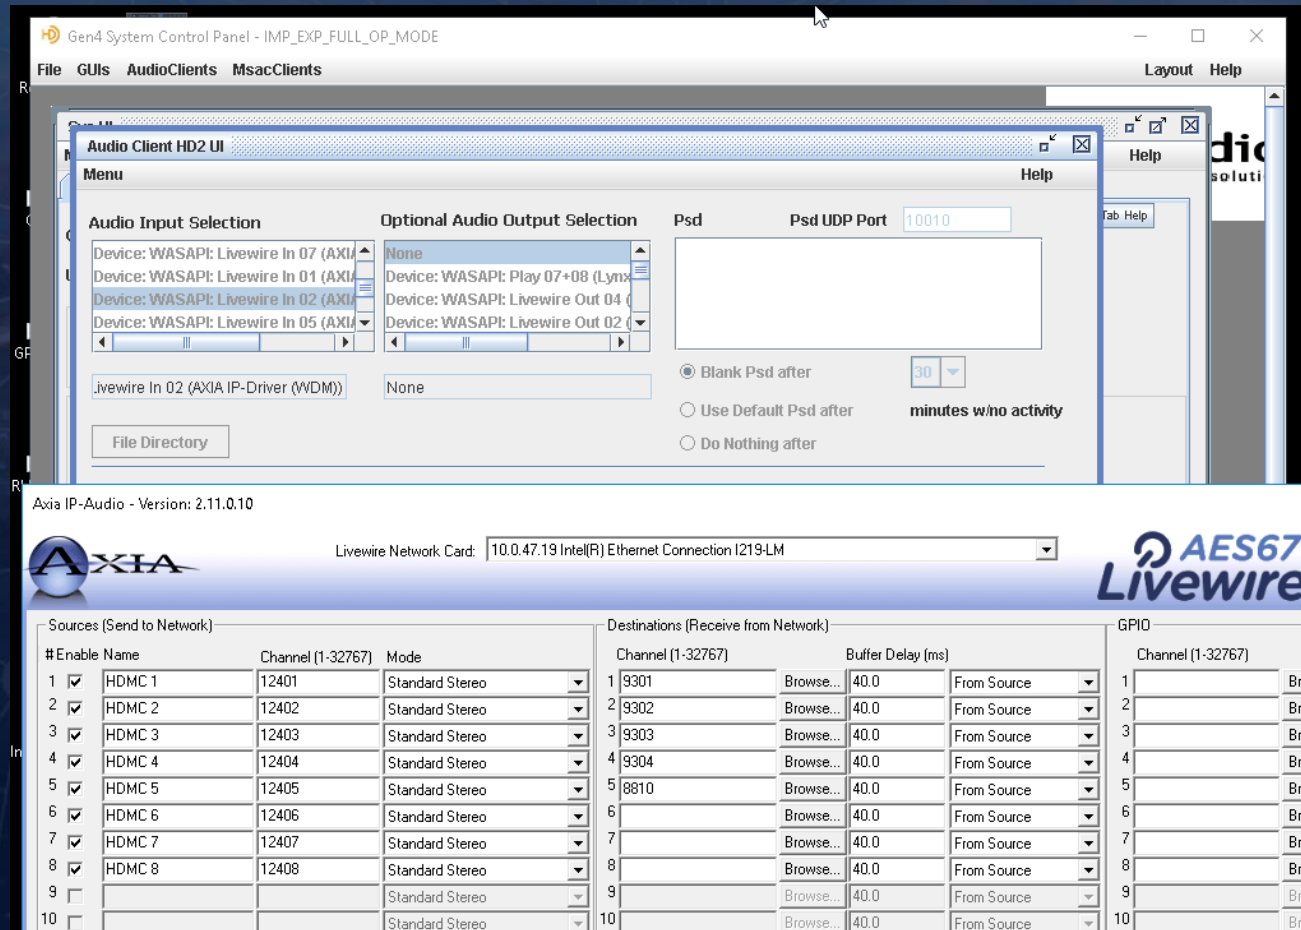

Exporter 2 Engine Link (E2X)

4th Generation HD Radio
System Architecture

Open OS Approach: Livewire+ on HD MultiCast+

AES67 / Livewire+ driver plug & play for HD2, 3, 4
Free on HD MultiCast+ for Livewire users *

NEW

Open OS approach: Omnia Enterprise 9s for HD2-4

Omnia Enterprise 9s

- HD2-4 processing in a single instance
- Supports μ MPX for translators
- GEN4 Importer/Exporter
 - interface GEN4 audio clients
- HD MultiCast+
 - Ample CPU power

More to come in the following webinars ...

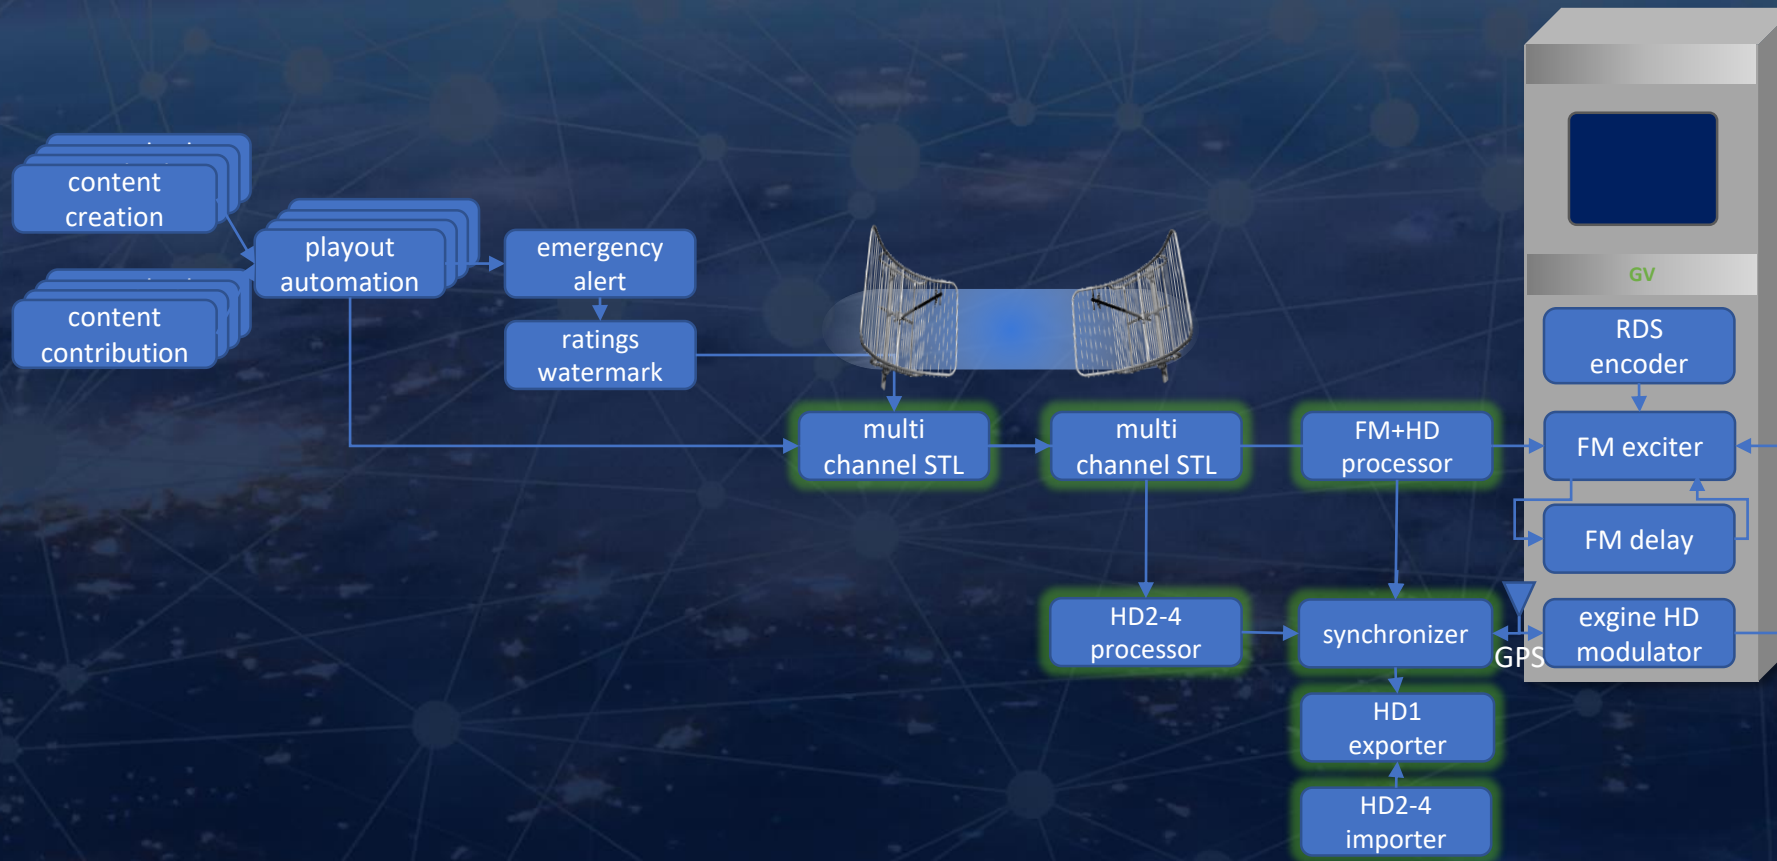

6 Virtual Importers Single HDMC+

What if the HD Radio Air-Chain moved back to the studio?

Reduce TX site complexity and centralize HD Radio equipment

What if the HD Radio Air-Chain moved back to the studio?

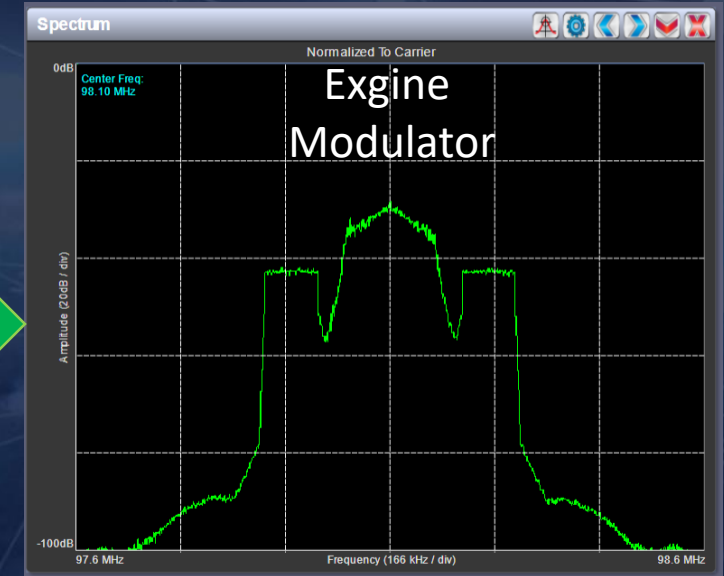

Reduce TX site complexity and centralize HD Radio equipment

Made for Radio: Exporter 2 Engine (E2X) link

UDP or TCP

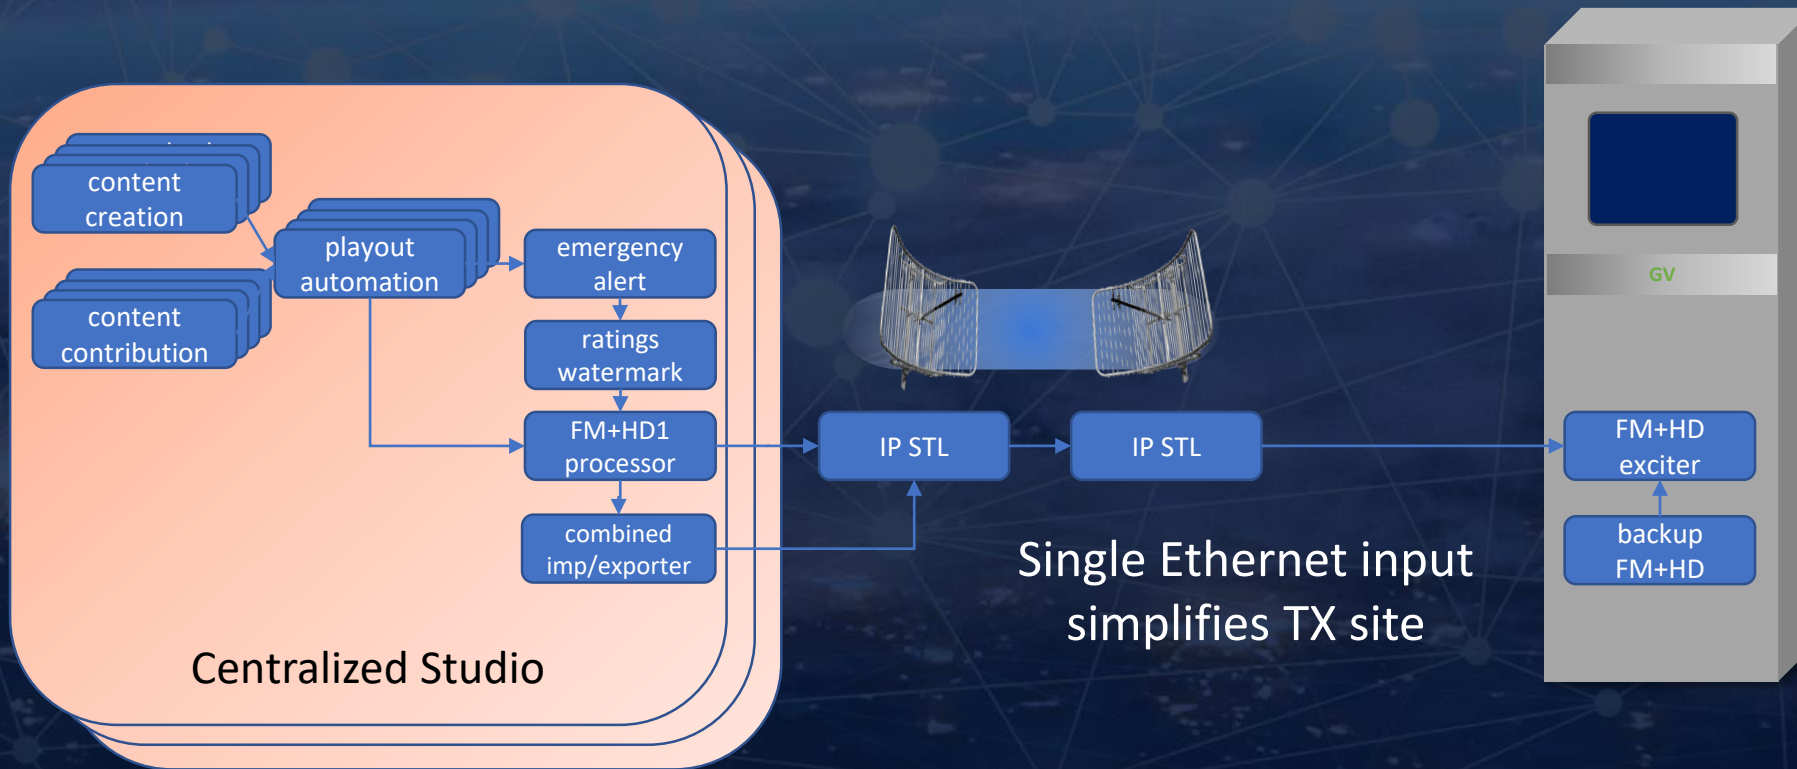

- Connects exporter to engine modulator over Ethernet
 - Carries **HD Radio content ONLY**, no FM content
 - Designed for IP STL transmission, low bandwidth
- Accepted “de-facto” industry standard
 - Not defined in NRSC specification ... but everyone uses it
 - Interoperability with all major vendors
 - Backwards compatibility
 - Nautel Reliable HD Transport improves E2X transmission reliability

Can we Centralize the Entire Radio Air-Chain?

Can we move the FM and HD Air-Chains together?

Can we utilize “Made for Radio” standards & technologies?

Tune in to our following webinars ...

Summary: Setting the stage for change

- A collaboration by two innovators
 - We believe there are significant gains possible that can create easier and cheaper approaches for broadcasters.
- Challenges in the Air-Chain, especially the HD Radio Air-Chain
 - Complexity and where to place it
- Toolkit of “Made for Radio” standards and technologies
- Some examples of fresh technological approaches
- Please join us again in two weeks for more fresh approaches and demos
