

Exporter Plus

HD Radio EXPORTER

Quick Specs

- Supports AM and FM IBOC
- Input/Output: Digital In, Analog In/Out, Monitor Out, USB, 2xRJ45, 10 MHz out, 44.1 kHz out, Remote In/Out
- Integrated GPS receiver
- Full-featured front panel control
- IP-based user interface and remote control
- Front panel headphone jack for convenient monitoring of digital and analog audio
- Power failure tolerant
- Robust firmware based solution
- Easy firmware upgrades
- 1RU chassis
- 19" wide, 1.75" high, 16" deep

Overview

The Exporter Plus encodes main program service audio and combines it with audio and data services from the Importer. Dual ethernet interfaces support IP routing, which can be used to enhance the robustness of streaming HD IP data. The Exporter Plus is fully compatible with Nautel's award-winning Reliable HD Transport*.

The Exporter Plus is compatible with the new HD MultiCast+ Importer, which replaces the Importer Plus.

The Exporter Plus provides users with a full-featured front panel that includes a headphone jack, for convenient monitoring of digital or analog audio, and an LCD user interface with live audio peak and RMS level meter. The Exporter Plus also features an IP-based user interface enabling both manual and automated remote operation.

Utilizing a 100% solid state architecture, the Exporter Plus offers a simple and cost effective means to transition your station to HD. All software is embedded within the exporter's flash-based memory.

*Nautel Reliable HD Transport: an award-winning tool that reduces the bandwidth requirement and enhances the reliability of the exporter to exciter data connections.
